Whatever your needs...
we have the solution.

Concrete is the most commonly used building material in the world. It is designed to be tough, durable, practical and sustainable. Some would consider concrete's inherent strengths to also be its architectural weakness ... until now.

The **INDUROSHINE** system allows you to specify the Polished ... Densified ... Surface (PDS) that you and your client want.

What sets the **INDUROSHINE** system apart from the competition is the selection of equipment and diamond grinding tools from **VIC International**, the originator in North America in the art of concrete grinding and polishing, teamed with the best densifier and hardener on the market, **W. R. MEADOWS LIQUI-HARD®**. The combination allows you to specify and achieve unsurpassed results on your grinding and polishing applications.

If you want a low maintenance ... durable ... architecturally pleasing floor ... specify **INDUROSHINE**.

INDUROSHINE is an environmentally friendly, jobsite friendly flooring system that combines the "green" concrete grinding and polishing system from **VIC International** with **LIQUI-HARD** 0.0 g/L VOC-compliant densifier and sealer from **W. R. MEADOWS**. This provides owners and specifiers with the best polished concrete system on the market. Durability that lasts!

The SYSTEM

Specify the look you want. (You can view **INDUROSHINE** guide specifications for application procedures at www.wrmeadows.com)

INDUROSHINE PDS-1
Satin finish that will reflect images from side lighting.

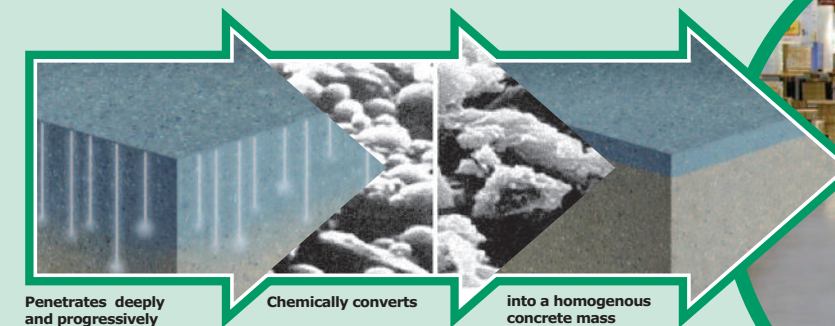

INDUROSHINE PDS-2
Semi-gloss finish that will reflect overhead and side images from 35-45 feet with increased light reflectivity.

INDUROSHINE PDS-3
High-gloss finish that will look wet and show mirror like reflections of side and overhead images.

The DENSIFIER

LIQUI-HARD is a waterborne concrete densifier and chemical hardening compound. It is a ready-to-use, colorless liquid, consisting of proprietary active chemicals that deeply penetrate the surface of concrete. Through a chemical reaction process, **LIQUI-HARD** penetrates progressively through the concrete and chemically solidifies all component parts into a homogenous concrete mass. This unique blend of chemically reactive ingredients provides the highest level of protection for your concrete. Ask us for independent test results today.

With **LIQUI-HARD**
the greater the wear...
the greater the
shine and polish.

The TOOLS

This system utilizes the "green" proprietary grinding and polishing system from **VIC International**, the leader in the grinding and polishing industry.

W. R. MEADOWS and **VIC International** have a combined experience of over 120 years in protecting and preserving concrete floors.

INDUROSHINE is the next generation in "green" concrete use ... it combines the best densifier with the best tools and equipment. Dealing with the leading innovators in the industry allows you to specify with confidence a "green" system that is designed to last.

INDUROSHINE is developed to be used as part of your sustainable design. Concrete is comprised of naturally occurring minerals that can now be made into an attractive ... tough ... durable floor finish, without the need for expensive coverings or coatings that require frequent maintenance.

**Polished to perfection ...
choose the system that
meets your needs.**
